**Data Sources, References & Notes:** Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States for Wuhan, China, and Japan. The numbers and territorial jurisdictions to the Centers for Disease and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated from the previous day. \*Counts for New York City and New York state are shown separately; data for COVID-19 cases as reported by U.S. states, U.S. territories, New York City, and the District of Columbia from the previous day. Probable cases and deaths for the State excluding data for NYC. When not available to CDC this is annotated by N/A. Rates are calculated using U.S. Census Bureau, 2018 American Community Survey 1-year estimates and are shown as cases/100,000 people. The map shows total cases per state, new cases in the last 7 days per state, and the rate (cases/100,000) per state. The 7-day moving average of new cases (current day + 6 preceding days / 7) was calculated to smooth expected variations in daily counts. Demographic data for deaths is based on a subset of cases with each case-level data is available. Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's overall case numbers are validated through a confirmation process with each jurisdiction. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and confirming cases displayed by other sites may differ.
